

Statement of Occupational Safety and Health

SunInc is committed to provide employees with a safe and healthy workplace. In order to achieve this objective, SunInc takes all measures to identify, assess, manage and mitigate the hazards faced by employees and stakeholders. In its effort and determination to inculcate a safe work culture, it was certified with the OHSAS 18001:1999 standard in 2001 and it has successfully maintained its certification and was re-certified in 2004 successfully.

The main objective towards Occupational Safety and Health (“OSH”) excellence is to achieve “Nil Fatality”. All work activities are carried out after hazard identification and risk assessment. Subcontractors are exposed to the Hazard Identification, Risk Assessment and Risk Control (“HIRARC”) procedure and active participation is carried out to manage control measures by implementing Job Safety Analysis.

The implementation of Job Safety Analysis is now widely accepted by subcontractors and it is successfully enforced at the projects sites. In its effort to comply with the applicable OSH legislation of the country, a systematic site inspection procedure is implemented. The Project Managers, Safety and Health Officers conduct regular inspection at sites to achieve the desired results. SunInc has a comprehensive inspection checklist with a score of 70% and above to be achieved company wide and at project levels.

All project sites have a well represented Safety and Health Committee, which is chaired by the Person In Charge. The participation of the subcontractors and employee representatives are of paramount importance to identify the unsafe acts and conditions at the site. Proactive decisions are made to achieve a continuous improvement at the sites.

In its endeavour towards achieving OSH excellence, employees and subcontractors are exposed to the OSH management system training. All workers are safety inducted, and subcontractors are provided with specific courses like Scaffolding Erection, First Aid, Electrical Safety and Heavy Machinery Operation.

During the year, the OSH Department conducted a HIRARC course for the Project Managers and Supervisors. SunCon received the prestigious National OSH Excellence Award for the construction sector for 2005 and the Malaysian Society for Occupational Safety and Health Gold Award (Class II) for 2004.
